

Outer test fold k = 5: the four inner models that produce the second layer's training data

	fold 1	fold 2	fold 3	fold 4	fold 5
inner j = 1	predicted	train	train	train	never seen
inner j = 2	train	predicted	train	train	never seen
inner j = 3	train	train	predicted	train	never seen
inner j = 4	train	train	train	predicted	never seen

Predictions for folds 1-4
(from models that saw neither the
record's fold nor fold 5)

→ **train stacking, multicalibration
boosting and projection**

→ apply to fold 5, predicted by the
level-1 model trained on folds 1-4
